

New Roulette Emulator Software for professional Roulette Player

How to Win at Roulette using my simple and effective Roulette Emulator.

MMM [66X6] – is based on a new MMM platform called MMMX that will allow you to use up to 66 steps, configurable table bets, custom bets amount, control of won/lost steps, suggest correction feature, breakpoints feature for all 66 steps, play after special custom sequence or sequences, create your own roulette system, load and play other roulette systems, real time palette modification, roulette systems database and real money simulator. MMMX come to help the player with an automated software that can play like a robot many roulette systems.

All you should do is to select the casino where you want to play and betting palette that represent a roulette system then click on NEW GAME button and all other things like betting will be done by MMMX.

While MMMX is making money, the player can watch and enjoy the game.

Right now, this tool is adapted for more than 80 online casinos and it works for every roulette table with starting bets from 1 cent up to 1000\$.

By using MMMX you will not have only one roulette system but a lot of roulette systems and you can even write your own roulette system and even to modify an already existing roulette system.

So there are only two steps to do:

1. Select the casino where you want to play.
2. Select a roulette system you want to play.

Related to second then there you have several options:

1. Load an already existing roulette system.
2. Write your own roulette system or modify an already exiting roulette system.

So what is MMMX in simple words?

MMM is a roulette tool and it can be associated with a visual programming language used to code your roulette system.

So once you buy MMMX you don't buy one roulette system but a roulette tool that can create an unlimited numbers of roulette systems and to play any already existing roulette systems made by our MMMX coders.

Who are MMMX coders?

MMM coders usually are our customers that at the end are professional roulette players.

Why the name of the software is Money Maker Machine?

This is the first code name received this software.

I assigned this name because this software work like a robot and this mean like a machine.

What other names will describe it better?

1. Roulette Systems Creator.
2. Roulette Systems Player.
3. Roulette Systems Emulator.
4. Roulette Systems Coder.
5. VPL for Roulette Systems. (VPL=visual programming language)

So this tool was created to create any type of roulette systems and to play them.

Who created this roulette tool?

If to say the truth then it was created with the help of our customers.

The most important thing for it is the palette that represent one roulette system so it will do all you will say to it and nothing more.

Also it will show you the status of the game and whole playing process real time.

The tool act as emulator for your roulette system so as you understand the most important thing here is palette or let call this your roulette system.

If you have any questions at all, just click on the Contact Us link to get in touch with us. We will always reply to every email we receive.
